

PA-63

Multihead weighing machine

Accurate weights

High production

Versatile

Compact
footprint

PA-63

ACCURACY – RELIABILITY – HIGH PRODUCTION

With 14 preloading buckets and 14 weighing buckets, the PA-63 is able to produce accurate weights. The multi-head weigher concept gives a large number of combinations in order to achieve maximum production.

VERSATILE AND SIMPLE OPERATION

The buckets have been specially designed to work with a wide range of fruit and vegetables.

Buckets, vibrators and other parts are easily detachable (modular design), allowing for easy cleaning and maintenance of the machine.

The PA-63 is an electrical weighing machine without pneumatic devices that are important contributors to mechanical failures.

The weighing machine comes complete with touch screen for easy programming and maintenance.

COMPACT FOOTPRINT

The packaging machines are installed underneath the platform-support of the weighing machine reducing the footprint of the line. This design was specially conceived to for an efficient installation with two D-Pack baggers.
